

GS PlantOptics Supports Partner Expertise to Exceed End User Timelines & Expectations

Challenge

Sani-Matic, a Madison, Wisconsin-based manufacturer of sanitary process cleaning equipment, completed their first AVEVA System Platform implementation of a Clean-In-Place (CIP) system at a large craft brewery. The overall process was complex and called for an overview of the system, four recipe editors, and monitoring screens for the CIP Processes.

Solution

Object-oriented and graphical standards already in place at the facility established AVEVA System Platform as the obvious solution. Sani-Matic was the craft brewer's preferred vendor for managing updates and edits to the CIP system's Human Machine Interface (HMI) and controls. While Sani-Matic had previous experience with the AVEVA InTouch HMI solution, they had not previously had an opportunity to work with System Platform. Following several conversations around the project, it became clear that in order to meet the brewer's expectations and timelines, they required assistance with the visualization tasks. By augmenting their industry expertise and HMI experience with GS PlantOptics' advanced portfolio knowledge, Sani-Matic would ensure the project's completion by the given deadlines.

GS PlantOptics' team of technical engineers applied the client's existing standards to the creation of more than 150 AVEVA objects and graphics. Additionally, a GS PlantOptics representative visited the project site to fully deploy the new system, applying necessary modifications to accommodate additional equipment and to extend flexibility to the delivered HMI.

Results

With the new system, the craft brewery now has complete, automated visibility to the CIP process with provisions supporting future scalability. The expertise and customer service provided by Sani-Matic Systems Engineers, leveraging the added capabilities of GS PlantOptics' technical engineers, led to the project's great success with the foundation and opportunity for expansion.

Customer

- Sani-Matic

Industry

- OEM

Solutions

- AVEVA System Platform
- GS PlantOptics Delivery Services

Business Results

- Automated Visibility to CIP Process
- Foundation for System Scalability

About Sani-Matic

Sani-Matic, Inc. designs and manufactures automated sanitary process cleaning equipment to ensure systems are optimized for money-saving efficiencies and increased productivity.

About GS PlantOptics

GS PlantOptics, formerly Wonderware Midwest, is the AVEVA Select channel partner serving the upper Midwest with local sales and technical services for the full AVEVA Software portfolio.
